CHICKENS AND EGGS

Layers, Potential Layers, Rate of Lay and Egg Production
Monthly 1964 - 1965

March 4, 1966

Egg production in 1965 totaled 64,588 million eggs, a new record high for the Nation, according to the Crop Reporting Board. The 1965 egg production was slightly higher than previous record output of 64,421 million produced in 1964.

This production resulted from a record high annual average rate of lay. Layer numbers during 1965 averaged 296.6 million which was slightly less than 1964. The average rate of lay per layer on hand annually was 217.8 eggs in 1965 compared with 216.5 for 1964, the previous record for the United States.

Potential layers (hens and pullets of laying age plus pullets not of laying age) on farms January 1, 1966 are estimated at 352 million compared with 356 million a year earlier. Of the 352 million birds, 86 percent were of laying age, and the remaining 14 percent were pullets not of laying age. On January 1, 1966, the laying flock was composed of 54 percent pullets and 46 percent hens.

The number of egg-type chicks hatched during 1965 from January through May was 14 percent below the same months of 1964, while the June through December hatch was 3 percent above the comparable period of 1964. Total egg-type chicks hatched for the year declined 7 percent from 1964.

The statistics for chickens and for egg production shown in this report were originally published in the monthly Crop Production releases.

NUMBER OF LAYERS, EGGS PER LAYER, AND TOTAL PRODUCTION, U. S. BY MONTHS, 1964-65
